

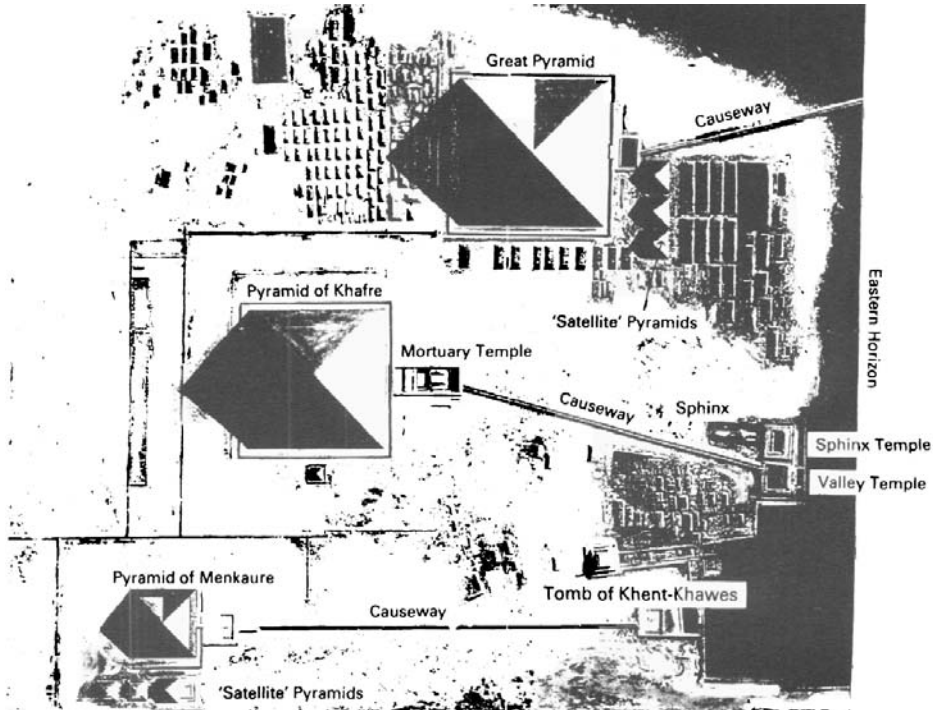

EXHIBIT I_B-3: Giza Egypt Plateau Complex ___ Overhead Diagram and Dimensions

North Coordinate

(FROM HANCOCK AND BAUVAL, THE MESSAGE OF THE SPHINX, 1996, FIGURE 2, PG. 24)

EXHIBIT NOTES:

- Compare with the EXHIBIT I_B-2 southeastern view photograph to appreciate the exactly planned layout along the cardinal north-south and east-west directional coordinates the ancient architects of the Giza Plateau Complex utilized. **Especially note** the 45 degree diagonal that the three Pyramids lie on from the **Great Pyramid** south west to the **Second Pyramid** with the **Third Pyramid** offset somewhat forward of that diagonal to the east.
- The Sphinx Rock Sculpture and its **Sphinx Temple** and **Valley Temples** are exactly lined up facing the **Eastern Horizon** where the Sunrises daily.
- The 3 Great Pyramids are aligned along a diagonal that mimics the **Orion Constellation's 3 Belt Stars**. The **Orion Constellation** was associated by the Ancient Egyptian Mystery School of On (Annu) with the **First Spiritual Plane Sun God Asar**, who is confounded by the Theban Sorcery Lodges and in turn Egyptologists with the God of Resurrection Osiris.

“The **Great Pyramid** was originally 481.3949 feet in height (now reduced to just a little over 450 feet) and its four sides each measure some 755 feet in length at the base. The **Second Pyramid** was originally slightly lower ___ with a designed height of 471 feet ___ and has sides measuring just under 708 feet in length. The **Third Pyramid** stands some 215 feet tall and has a side length at the base of 356 feet.” (Hancock and Bauval, ibid, page 37)

- “... ‘impossible’ ___ at any rate for a people like the ancient Egyptians who are supposedly to have known nothing about the true shape and size of our planet ___ is the relationship, in a scale of **1:43,200**, that exists between the dimensions of the [**Great**] **Pyramid** and the dimensions of the earth. Setting aside for the moment the question of whether we are dealing with coincidence here, it is a simple fact, verifiable on any calculator, that if you **take the monument's original height (481.3949 feet) and multiply it by 43,200 you get a quotient of 3,938.685 miles**. This is an underestimate by just 11 miles of the true figure for the **polar radius of the earth (3949 miles)** worked out by the best modern methods.”

“ Likewise, if you **take the monument's perimeter at the base (3023.16 feet) and multiply by 43,200 then you get 24,734.94 miles ___ a result that is within 170 miles of the true equatorial circumference of the earth (24,902 miles)**a minus-error of only three quarters of a single per cent.” (Hancock and Bauval, ibid, page 38) (emphases added)
