

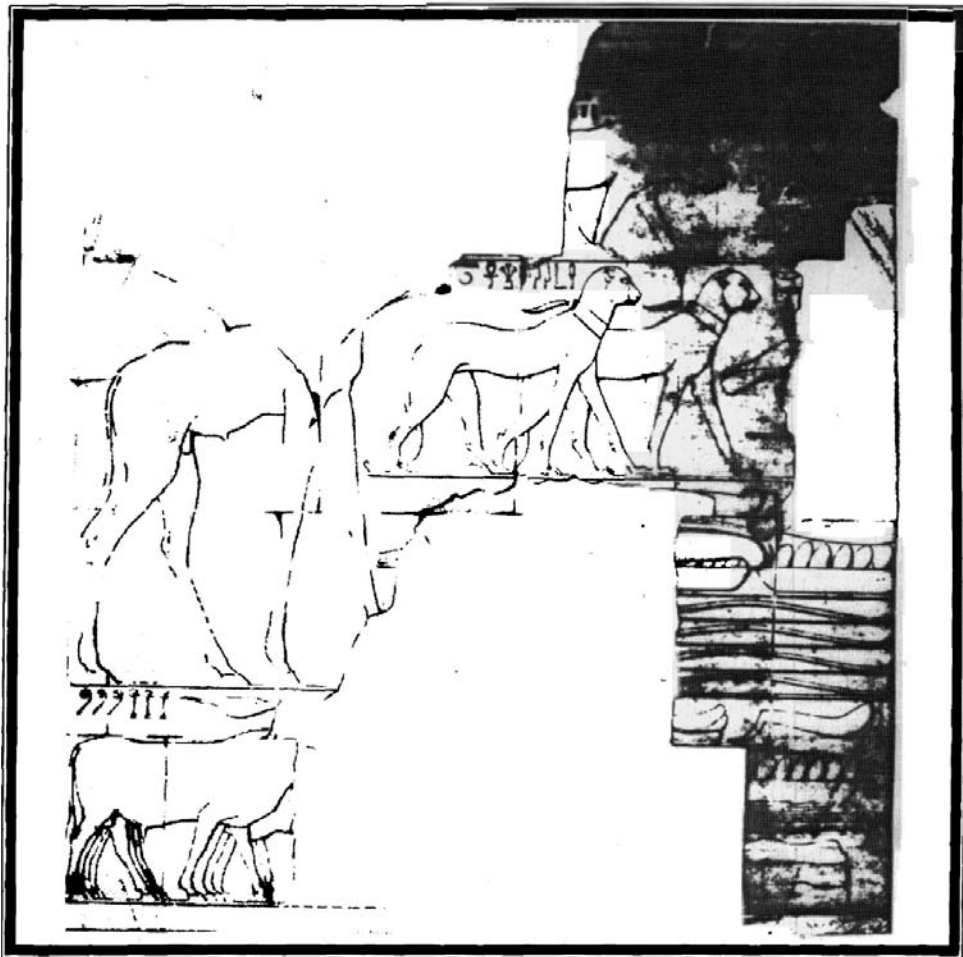

EXHIBIT IV_F-1:: Pharaoh Queen Hatshepsut's [Expedition to Punt](#), [Sheba](#), [Meroe](#) and [Khenthennefer](#) : Giraffe and Other Animals Brought Back to Egypt

(from E.G. Naville, [Temple of Deir el Bahari V. III](#))

EXHIBIT NOTES:

- The **male Giraffe's** upper body neck and head have been vandalized destroyed but is easily identified and properly analyzed as proof of the [Queen Hatshepsut's Punt Expedition](#) naval ship and land safari's final destination to [Khenthunefer](#) in the **Central Africa Nile River Great Lakes** area. For a full description of [Khenthunefer](#) study [EXHIBIT IV A](#).
- Comparing this **male Giraffe** with the one shown in [EXHIBIT IV D-3](#) and [EXHIBIT IV D-4-2](#), they are both shown with male genitals suggesting that they are the same **male Giraffe** in the *Del El Bahari* Wall Relief records; i.e. the question of the final destination of **Queen Hatshepsut's Punt Expedition** and thus the identity of ancient Egyptian's "**Ta Neter**" or "land of the Gods" is unquestionably [Central Africa's Nile River Great Lakes](#) called [Khenthunefer](#) in Ancient Egypt/*Kemit*.
- **Thus the identity of the aboriginal founders of Ancient Egypt/Kemit** as theorized by those courageous Egyptologists [Abbe' Emile Amelineau](#), [Jean Champollion](#), [George James](#) and [Chek Anka Diop](#) as the black African Nile River Valley people we know as the 4 [Anu peoples](#) of the ([a](#))[Nubia](#), [Kush](#), [Meroe](#) and [Anu Antiu](#) (of [Khenthunefer](#)) peoples.
- **Leopards** are sacred and were captured on the land safari into [Sheba](#) (modern Ethiopia highlands) and [Meroe](#) (modern lowlands of Sudan and Ethiopia) shown in [EXHIBIT IV D-4-1](#).
- **Cattle** too were sacred, the [Sun Goddess Het Heru](#) was symbolized as a cow and were cultivated in [Punt](#) and [Sheba](#) alongside the **Sustainable Agri-Forest** environment. According to the Greek Historian [Herodotus](#) the [people of Egypt/Kemit did not use cattle for flesh food, but for their milk](#). Thus peoples of [Punt](#) and [Sheba](#) were probably **meat eaters**, while the **Anu Peoples** of [Meroe](#) and [Khent Hun Nefer](#) would have been [vegetarian/vegan](#).
- The Predynastic introduction of **cattle** by [invading peoples](#) by 10,000 B.C. began the desertification of the **Nile Valley "Garden of Eden"** and top soil erosion silting the **Nile Delta**.
